| 1. Getting started | 8. Chat backup and restore |
| 2. Chatting | 9. Auto-reply |
| 3. Groups | 10. Scheduled messages, broadcast lists and themes |
| 4. Voice and video calls | 11. Status, calls list, You tab and wallpapers |
| 5. Privacy and safety | 12. VAKSYN Prime |
| 6. Photos, videos and storage | 13. Delete your account |
| 7. Use VAKSYN on a computer | 14. Help and contact |

1 Getting started

- Install VAKSYN on your Android phone and open it.
- Enter your mobile number. We send a 6-digit code by SMS — type it to sign in. There is no password to remember.
- Add your name and a photo. That is all; your contacts who use VAKSYN appear automatically.
- You stay signed in on your phone until you choose "Log out".

2 Chatting

- Tap a contact and type. Tap the paperclip for photos, videos, documents and voice notes.
- Reply: swipe or long-press a message and choose Reply. Edit: long-press your own message and choose Edit (free: 15 minutes; Prime: 60 minutes). An edited message shows "edited".
- Delete for everyone, Forward, Star (find them later in Settings → Starred messages) and View once are in the same long-press menu.
- Every one-to-one chat and group message is end-to-end encrypted — only you and the people in the chat can read it, not even VAKSYN.

3 Groups

- Create a group from the New chat button: choose people, give it a name.
- Open the group name at the top to see members. Admins can add people, remove a member, and make others admins.
- Anyone can leave a group with "Leave group". A group can have its own auto-delete timer.

4 Voice and video calls

- Open a chat and tap the phone or camera icon at the top.
- Calls are protected in transit. Use a good Wi-Fi or mobile connection for clear sound and picture.

5 Privacy and safety

- Settings → Privacy lets you choose who sees your last seen, photo, about, and read receipts.
- Settings → Two-step verification adds a PIN that is asked when you register again.
- Safety number: open a chat → : → "Verify security code". Compare the digits (or scan the code) with your friend in person or on a call. If they match, your chat cannot be tapped. If a friend changes phone, VAKSYN warns you that their code changed.
- Block a contact in Settings → Blocked contacts, or report abuse from the chat.

6 Photos, videos and storage

- Settings → Storage & data lets you decide what downloads automatically (on Wi-Fi, on mobile data, or never) — per type: photos, videos, files. Nothing is saved to your gallery unless you allow it.
- Auto-delete: choose 24 hours or 1 month for all chats, for one group, or for one person. Old messages and files are then removed from your phone.
- Message timer (disappearing messages) can be set for a chat from the chat menu.

7 Use VAKSYN on a computer

- On the computer open www.vaksyn.com/app. A QR code and an 8-character link code appear.
- On your phone: Settings → Link a device → scan the QR code. If the camera cannot scan, choose "Enter a code instead" and type the 8 characters.
- You can link up to 6 browsers at once with Prime, fewer without. Each browser gets its own encryption keys, so your chats stay end-to-end encrypted there too.
- To remove a browser: Settings → Active sessions → log out that device.

8 Chat backup and restore

- Settings → Chat backup → Back up now. Choose a backup password — VAKSYN cannot recover it, so write it down.
- The backup is encrypted on your phone before it leaves it. VAKSYN only stores unreadable data.
- On a new phone (or after reinstalling), sign in with your number, then choose Restore and enter the same password. Your old chats come back.

9 Auto-reply

- Settings → Auto-reply. Switch it on and write your away message.
- The message is sent once a day to each person who writes to you in a one-to-one chat — never in groups. It is sent by your phone, so VAKSYN must be running and online.
- With Prime you can choose days and hours (for example every night 10 pm → 7 am) and who receives it: everyone, only your contacts, or only people who are not your contacts.

10 Scheduled messages, broadcast lists and themes

- Scheduled messages: open a chat → : → Scheduled messages → Schedule. Write the text and pick the time. Your phone sends it then, so VAKSYN must be installed and online; if the phone was off, it goes as soon as you open VAKSYN.
- Broadcast lists: Settings → Broadcast lists → New list. Pick people and save. Tap the list, write once — each person gets it privately in your chat with them and never sees who else got it.
- Themes: Settings → Themes. Choose the colours of the top bars and your sent messages. The chat background is in the chat menu : → Wallpaper.
- Pin chats to the top: long-press a chat → Pin chat (3 chats; Prime: 10).
- Free amounts: 3 waiting scheduled messages, 2 broadcast lists of up to 10 people, 2 themes. Prime raises all of these.

11 Status, calls list, You tab and wallpapers

- Status: open the Status tab. Tap My status to post coloured text or a photo. Your contacts see it for 24 hours and you see who viewed it. Status is not end-to-end encrypted like chats.
- Calls tab: Recent shows received, dialed and missed calls with clear icons. Favorites, Emergency (112, 100, 108, 101, 1091 and your own emergency contacts) and a search box are there too. The dial pad button calls any number; if the person is not on VAKSYN you can invite them by SMS.
- A call now rings on the phone's own incoming-call screen even when VAKSYN is closed. Allow notifications and 'show over lock screen' when the phone asks.
- In a call you can turn the speaker on or off and switch between the front and back camera.
- You tab (your photo at the bottom right): edit your name, photo and about. The three dots at the top of every tab open Settings.
- Wallpapers: in a chat tap the three dots, then Wallpaper. Choose flowers and feel-good designs, or the signature designs of VAKSYN Prime.

12 VAKSYN Prime

- A small extra for a small price: ₹49 per month or ₹399 per year (Settings → VAKSYN Prime).
- Prime gives you: scheduled auto-reply, a bigger backup, bigger files, more linked browsers, and a longer time to edit messages.
- Your privacy is never for sale. End-to-end encryption, calls, groups, backups and all safety features stay free for everyone.
- Online payment opens soon. Until then, nothing is charged.
- Launch offer: for now every VAKSYN user gets all Prime extras free of cost.

13 Delete your account

- Settings → Delete account. We send a code by SMS to confirm. Your profile, keys, and the messages you sent are erased. This cannot be undone.
- If you cannot open the app, email contact@vaksyn.com. Details: www.vaksyn.com/delete-account

14 Help and contact

- Not receiving the SMS code? Check your number and signal, wait a minute, then try again.
- Chat says it cannot be decrypted after linking a browser? Log the browser out and link it again.
- Write to us at contact@vaksyn.com. Privacy policy: www.vaksyn.com/privacy
